335 Azul

Ref. 22295

Thalassa embodies a multicolored coral reef translated into a textile print. The design is rich in detail, rewarding the attentive eye as it gradually reveals the marine flora and fauna typical of tropical coral reefs—the most biodiverse marine ecosystems on the planet. Across the fabric's 140-centimeter width, one discovers corals, octopuses, sea sponges, anemones, clams, mollusks, microalgae, green and red algae, seagrasses, and even a treasure in the form of a pearl. This printed creation by Equipo DRT—crafted on a linen-and-cotton blend—is designed to spark the imagination. Whether used for curtains, cushions, bedspreads, headboards, or even lamps, Thalassa brings a rich, vibrant aesthetic to any interior.
